

AIRWAVE®

MADE FROM 80% RENEWABLE RESOURCES

PaperWave®

With our revolutionary new product PaperWave®, AIRWAVE is setting the bar for environmental protection. Made from 100% recycled paper, combined with an ultrathin layer of compostable sealant film the PaperWave® air cushion has achieved superior ecological benefits.

PaperWave® recycling paper/compostable air cushions

PaperWave® has a very thin seal layer based Bio-Film, which has been confirmed not to affect the recyclability of the paper. The product bears the RESY mark as well as the sorting-aid-symbol according to DIN 6120.

This makes it very easy for the consumer to decide on the correct recycling bin at disposal. The material is compostable and even degrades in Marine environment when mistakenly ending in water.

100% recyclable by repulping
100% compostable in nature
80% made of regrowing resources

With today's repulping technology, the paper and sealant layer will be separated during the recycling process.

This enables the new AirWave PaperWave® air cushion film to be recycled with the normal wastepaper or the bio-compostable waste.

4x8" and 6x8" in stock
other sizes and seal pattern on demand
