

AirWave

THE FIRST AIR CUSHION MADE FROM PLASTIC TRASH

EcoWave-100

AirWave EcoWave100 is:

- 100% climate neutral
- 100% made from recycled polyethylene
- 82% post consumer recycled (PCR) - made from collected trash
- 100% unique

EcoWave100 100% climate neutral

EcoWave100 air cushion film is made from 100% recycled materials, 70% of which is collected post consumer plastic.

Not all recycling is the same: pure waste from industrial production (PIR) is often used for the production of films because it is easy to process. AirWave Packaging, goes one step further and uses 70% PCR - these are plastics that have really been used in a product before, then collected, washed, sorted and processed. The generated recycle is later added back to the film. **This is what real sustainability looks like!**
